

# MASEK Insights2

## Savor Filipino cuisine exported worldwide thanks to Viking Masek technology

Recently Viking Masek installed the first of multiple packaging lines at the largest Filipino manufacturer of spices and sauces – Mama Sita's®. The complete packaging line consists of two (2) sachet machines SA600, each of them producing 250 sachets/min, and a top load cartoning system with carton erector CFM, loading units and carton closer CLM.

A unique and innovative feature of the line is a special unit that loads the sachets into the cartons. This system enables the end customer to easily change of the amount of sachets in the carton as well as the pack pattern. The packaging solution uses one carton erector and a system of conveyors that

distribute the empty cartons receive the outfeed of two (2) independent sachet machines, followed by robotic pick&-place loading unit and carton combiner to feed one (1) carton closing machine. This systems enables the customer to fit numerous packaging lines on their factory floor and increases plant capacity. Using the Viking Masek system, their entire packaging process was modernised and their productivity increased. The reliability of the new system meets the stringent demands placed on it by production.

With 53 years of experience in building packaging machines, Viking Masek has accumulated remarkable expertise that we use to help our customers.

### A NOTE FROM THE DIRECTOR

Dear business partners,

Welcome to the new edition of VM Insights. We are excited to share with you an overview of new and interesting technologies at Viking Masek.

Nothing is more important to us than a happy and satisfied customer. Whether you are looking for a single vffs machine or complete packaging line, consider us your trusted partner. Viking Masek is a single source supplier for complete packaging solutions, which is what our customers appreciate and why they choose Viking Masek.

We have created VM Insights to highlight how we create innovative solutions for our clients, for instance for company OLMA and their unique cheese package.

Enjoy reading.

Jan Masek  
Viking Masek CEO

# A Look back at Interpack

Viking Masek is looking back at the biggest event in 2017 in the Packaging industry – Interpack 2017. Interpack is the perfect platform for Viking Masek, a trusted supplier of packaging equipment, to highlight its expertise and technology innovations.

The main motto of this year for Viking Masek was “Pack Your Emotions” displayed prominently in the 300 sqm booth. Visitors to the VM booth saw the latest innovations in vffs, stickpack and cartoning technologies.

The brand new MS400 vffs machine featured continuous motion inline quad seal assembly to produce quad seal bags at a speed

of 120 bags/min. The same machine can also produce pillow, gusset and even Doypack bags, all with or without zipper.

A unique solution was revealed to the public for the first time: A multilane check weigher for stickpacks, integrated into the stickpack machine ST800. This system enables customers to check the weight of every single stickpack and is fully integrated into the stickpack machine without increasing floor space requirements. The check weigher provides automatic feedback to the filling unit for weight adjustments if needed. Viking Masek's technology is unique on the market and already serves many customers worldwide.

# Unique cheese package made on Viking Masek machines

In Moravia, people love cheese as much as they love wine. The process starts with the selection of the best milk from local farmers and adding quality cultures. Cheese matures in the cellars of the city of Olomouc where it changes into soft, white Olmin cheese. The flavor is delicious.

Olma, one of the largest dairy producers, asked Viking Masek to supply

a fully automated packaging line for their Olmin cheese. Viking Masek used its expertise to develop the innovative packaging line to erect a unique star shaped carton, insert a leaflet into it, followed by the tasty and very popular cheese. The carton is then closed by Viking Masek's carton closer using holt melt glue and is automatically inserted by a picker into the special tray that is erected on a Viking Masek MFM car-

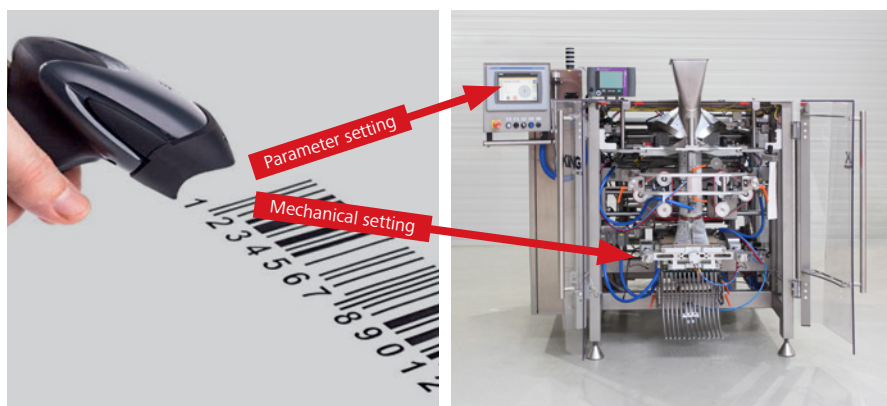

toning machine. This is a very unique and innovative solution combining multiple top load cartoning functions into one piece of equipment.

This complete solution provided by Viking Masek fulfills all of the requirements for a perfect dairy packaging system. We are pleased to provide a custom solution that packages this delicious cheese into this attractive and unique package. Enjoy it.

## New Scan'n'Run Technology helping customers all over the world

This system was developed to cut changeover times to a minimum, minimizes operator error and maximizes machine performance. After scanning the bar code on the film, the operator confirms the correct recipe, and the machine automatically sets up the parameters and adjusts all mechanical settings to the correct values. The system has been utilized successfully by many leading food and CPG manufacturers and co-packers, and is successfully used on Viking Masek's machines worldwide.

# Other 2017 Exhibitions

We look forward to seeing you at an other Exhibition in 2017.

**25–27 September 2017**

Las Vegas, NV USA  
Hall C, Booth C-5422

**26–28 September 2017**

Nec, Birmingham, UK  
Hall 5/Booth B80

**9–13 October 2017**

Moscow, Russia  
Hall 1/Booth 1B36

**6–8 November, 2107**

Changsha City, China  
Hall E2/Booth E2-06-1

## Cost savings with innovative Viking Masek technology

Viking Masek offers a unique solution for stickpack machines: A fully integrated multilane check weigher for stickpacks. The system enables customers to check the weight of every stick during the manufacturing process, collects data, and provides automatic feedback to the filling unit to adjust the filling parameters to reach the required weight. This system not only guarantees precise weight control of all sticks, but also saves money by reducing overweights and guarantees no underweights. The check weigher is seamlessly integrated into the machine frame and does not increase machine footprint. Return on investment with this technology is extremely fast.
