

Partners at Interpack

We would like to extend a special thank you to the following partners.

Scales supplied by:  

Printers supplied by: 

Film supplied by:   

Machine components supplied by:   

New Scan'n'Run Technology

Viking Masek's new Scan'n'Run technology enables the customer to increase the efficiency of their packaging machine. With this technology, change-over times are cut to minimum, operator error is min-

imized, and machine performance and efficiency are maximized. How does it work? The operator scans a bar code on the film and the machine automatically loads the correct recipe and all mechanical

equipment settings are automatically set to the correct position. This way, the potential for error is minimized and machine start-up is faster and smoother.

Other 2017 Exhibitions

We look forward to seeing you at an other Exhibition in 2017.

25–27 September 2017
Las Vegas, NV USA

26–28 September 2017
Nec, Birmingham, UK

9–13 October 2017
Moscow, Russia

Candy Bar Packaging Line

Challenges are what we thrive upon. Recently we were approached by a client that requested a high-speed and flexible cartoning line for his candy bars. After designing the complete packaging process, we installed the line at the customer's site by the end of the year. This packaging system begins with two infeed

points feeding 360 bars per minute each, continues to robotic collating units, and finishes with continuous motion high speed cartoner CAM. The line is versatile and can pack between 3 and 12 bars into a carton. For more information about this solution, please contact your Viking Masek sales representative.

Packaging Industry News by Viking Masek Company

MASEKInsights1

Largest Packaging Line Installation

Viking Masek doesn't just sell equipment. We are a very customer-centric company.

From our sales staff to our engineers to our service department, providing superior service and building relationships is always a top priority.

In 2016, we installed one of our largest packaging equipment lines. We worked very closely with the customer to develop the best technology and deliver a best-in-class packaging system tailored to their requirements. We carefully designed the complete packaging process, starting with an infeed conveyor system and continuing to product handling and collating units for the cartoning and case packing machines. We finished the packaging line with a fully automated robotic palletizer system.

When you choose Viking Masek as your supplier of primary and secondary packaging solutions, you can be assured to get best-in-class technologies from a global provider.

For more information about this solution, please contact your Viking Masek sales representative.

A NOTE FROM THE DIRECTOR

Dear business partner,

Viking Masek is a leader in the design and production of packaging machines. As the CEO, it is my pleasure to take this opportunity to welcome you to the Interpack Exhibition in Dusseldorf, Germany.

It has been many years since we built our first packaging machine, and every single build has given us knowledge that we've relied on ever since. From the founding of the company in 1964, customer satisfaction has always been our highest priority. We want to assure you that this hasn't changed and would like to use this opportunity to meet you at Interpack and to demonstrate our latest and greatest technology.

We hope you will enjoy your stay in Dusseldorf and are looking forward to our cooperation.

Jan Masek, Viking Masek CEO

Guide through the Viking Masek booth at Interpack

■ See a high-tech stickpack solution on our **ST800** machine, with a unique integrated check-weigher system for every single stickpack and automatic feedback system to the most precise auger filler.

■ See and touch the world's fastest vffs machine, the **Velocity**, making packages at up to 300 bpm.

■ Experience the benefits of full turn-key integrated packaging systems, like the **MS300** vffs machine in connection with the wrap-around case packer **CAM-W**.

■ Learn about successful clients that utilize Viking Masek's vffs **S250** machine with unique ultrasonic technology.

■ Learn how flexible the new continuous motion **MS400** packaging machine is, and how incredibly fast it can make bags like quad-seal, Doypack, and many more.

■ Learn about the versatile flexible stickpack machine **ST600** that can accommodate various bag sizes and offers fast change-over times.
